Ask AI a Question

Can you elaborate the details of Revenues and shipping cost?

Ask

The total revenue generated from all products sold is calculated by multiplying the number of products sold by the price of each product. The total revenue generated is the sum of all individual revenues from each product.

For example, in the provided data:

- The total revenue generated for haircare products is \$31,931.73
- The total revenue generated for skincare products is \$171,291.04
- The total revenue generated for cosmetics products is \$86,578.14

Similarly, the shipping cost for each product is provided in the data. The total shipping cost is the sum of all individual shipping costs for each product.

For example, in the provided data:

- The total shipping cost for haircare products is \$2,664.62
- The total shipping cost for skincare products is \$15,976.28
- The total shipping cost for cosmetics products is \$7,413.83

Therefore, the total revenue generated across all products is \$289,800.91 and the total shipping cost for all products is \$26,054.73.
